Letica's Canadian Reach Expands West

Expanded distribution pact sees Letica sold coast-to-coast

L.V. Lomas is very pleased to announce that effective Nov. 5, 2008, we have extended our distribution of Letica Corporation's product line into western Canada, covering the provinces of Saskatchewan, Alberta and British Columbia. L.V. Lomas has been a Letica distributor in eastern Canada since 2003, and this recent development now enables us to offer true nationwide representation for the complete Letica product line.

A leader in plastic containers

Headquartered in Michigan, Letica Corporation is both a leader and key innovator in the plastic container industry. Operating 13 state-of-the-art manufacturing plants strategically located across the U.S., Letica maintains a leadership role in these packaging categories:

- Injection molding
- Thermoforming
- Paper converting
- Graphics, including custom lithography

Another powerful asset in our product arsenal

Letica's packaging product line is available in a wide range of container types, sizes and colours, and can be printed with custom lithography. Popular with a large cross-section of industries and Fortune 500 companies, Letica's full range of products and services can be seen at www.letica.com.

And where plastic leaves off...

Complementing the Letica line, Lomas also provides a full range of tin-plated cans and steel pails for various applications. To learn more about our container product lines, contact any of our sales offices or Mike Steibelt, at 905-458-7111 x.213, msteibelt@lvlomas.com

Filter Anything

Along with containers, Lomas also represents a number of high quality filtration product lines.

FSI - Bag & cartridge leaders

Filter Specialists Inc., is a maker of liquid filters from fiber to finished product for many industries. Primarily bag and cartridge products, F.S.I.'s line is used in applications such as food & beverage, paints & coatings, chemical processing, electronics, oil & gas and health care processing.

World Minerals - Diatomaceous earth and expanded perlite filtration systems

World Minerals is the world's largest producer of filtration products made from diatomaceous earth and expanded perlite. Products include Celite, Harborlite and Kenite filter aids with applications in beer & wines, fruit juices, edible oils, sweeteners, pharmaceutical, water & liquid wastes and chemical processing.

Peco/Facet - Cartridges and vessels for many industries

Peco/Facet manufactures a line of liquid filter cartridges and filter vessels. Peco's products include an extensive cartridge line suitable for demanding industrial applications such as food & beverage, polishing, chemicals, general industrial and pulp & paper.

Global Filter - High-purity filtration for food, pharma and beyond

Global Filter carries products such as high-purity pleated polypropelene filter cartridges, micro-fiber, resin bonded and polyolefin bi-component materials. Global also produces a full line of food & pharma-grade cartridge filter vessels. Applications include food & beverage, pharmaceutical, enzymes, ethanol, cosmetics, inks and coatings.

MM Industries - vibratory screening filtration

Sold under the Vorti-Siv trademark, MM's filtration line includes vibratory screening/sifting equipment for powders and liquids, and self-cleaning filter vessels for high-viscosity liquid applications such as inks. Vibratory screening is used for both classifying powders or conventional filtration of mediums. Applications are in pharmaceutical, powder coatings reclaim, coatings and inks.
